Influenza Report - For the week ending 2/7/2015

10/1/2014 - 2/7/2015

Reported Cases (Boston Res.)	#
Influenza A	1106
Influenza B	35
Influenza A and B	6
Total	1147

ED Surveillance	
This Week % ILI	1.76%
Average % ILI (since 10/1/2014)	1.21%

Summary: As of 2/7/2015, 1147 cases of confirmed influenza were reported to the Boston Public Health Commission (BPHC), with 247 (21.5%) cases requiring hospitalization. Six influenza-associated deaths have been reported. Emergency department visits for influenza-like illness (ILI) comprised 1.76% of all ED visits this week.

Although influenza activity is declining, it remains widespread in the city. BPHC reminds everyone who has not received the influenza vaccine that it is not too late to be vaccinated. Influenza vaccine is still widely available.

Cases of influenza diagnosed in Boston and confirmed by any laboratory test must be reported to BPHC.

CDC Health Update Regarding Treatment of Patients with Influenza with Antiviral Medications

This CDC Health Update was issued on 1/9/2015:

- 1) to remind clinicians that influenza should be high on their list of possible diagnoses for ill patients, because influenza activity is elevated nationwide, and
- 2) to advise clinicians that all hospitalized patients and all high-risk patients (hospitalized or outpatient) with suspected influenza should be treated as soon as possible with an influenza antiviral medication. Clinicians should not wait for confirmatory influenza testing. Antivirals work best when given early, but therapeutic benefit has been observed even when treatment is initiated later.
