

New Positive Tests for COVID-19 (molecular tests, person-current-level), Boston Residents

7-Day Moving Average (Trailing), Apr. 30 to May 31

All-Boston COVID-19 New Positive Tests (7-day moving average)

May 29:
22.0 per day
(3.2 per 100K residents)

Number below goal:
-45.9
Goal:
67.9 (10.0 per 100K residents)

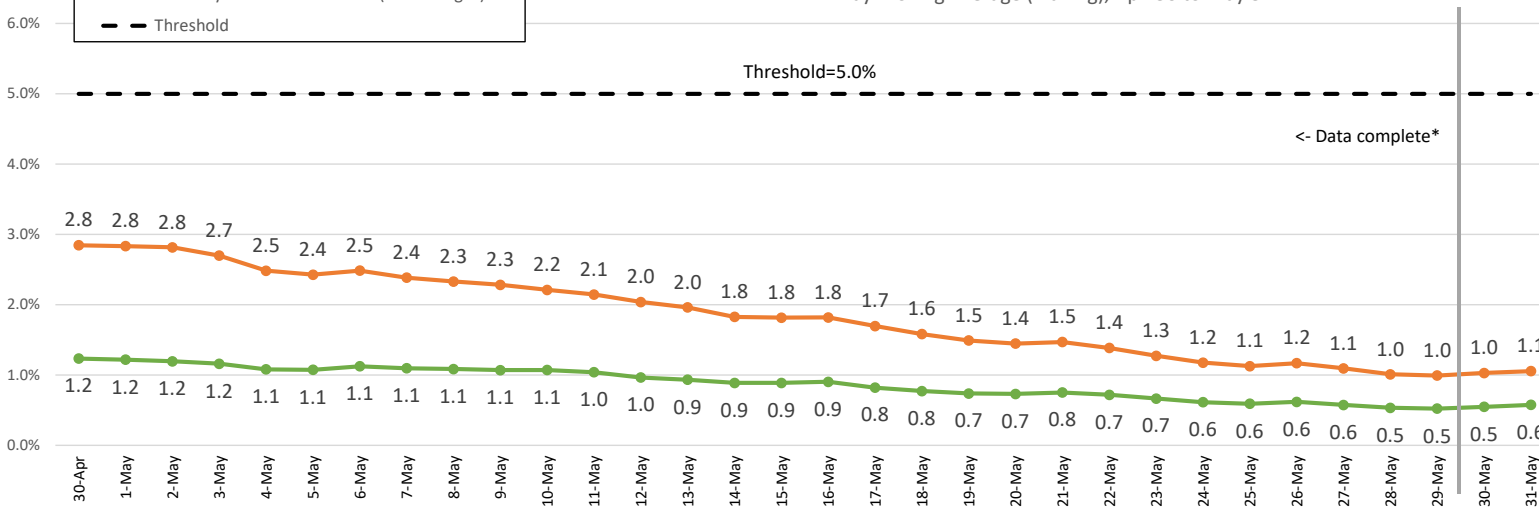

Number below threshold:
-317.7
Threshold:
339.7 (50.0 per 100K residents)

Data downloaded Tuesday, June 1, 2021

*Data to the left of vertical line assumed to be 95%-99% complete based on assessment of historical data.

Positivity for COVID-19 (percent positive for molecular tests, person-level), Boston Residents

7-Day Moving Average (Trailing), Apr. 30 to May 31

Current Community Positivity for COVID-19 (7-day moving average)

May 29:
1.0%

Percentage points below goal:
-3.0
Goal: 4.0%

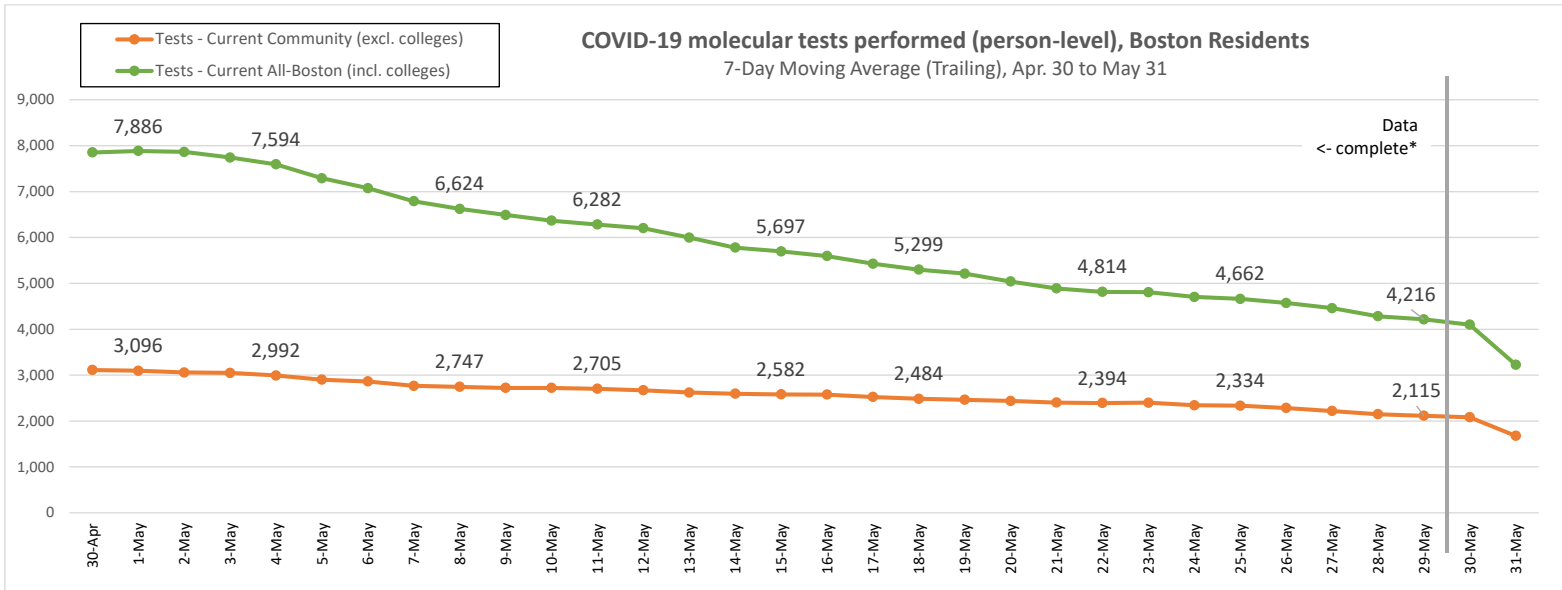

Percentage points below threshold:
-4.0
Threshold: 5.0%

Number of Boston neighborhoods with positivity ≥ 8.0%:
0

Threshold: 4 NHDs with positivity ≥ 8.0%

Data downloaded Tuesday, June 1, 2021. As of January 1, 2021, the line for cumulative positivity is no longer being presented as the current positivity lines provide the most appropriate person-level testing information for assessing positivity trends over time. The cumulative positivity measure is most appropriately applied for a single-point-in-time calculation of total person-level positivity from the start of the pandemic. For more information, please contact the Boston Public Health Commission Research and Evaluation Office (research@bphc.org).

*Data to the left of vertical line assumed to be 95%-99% complete based on assessment of historical data.

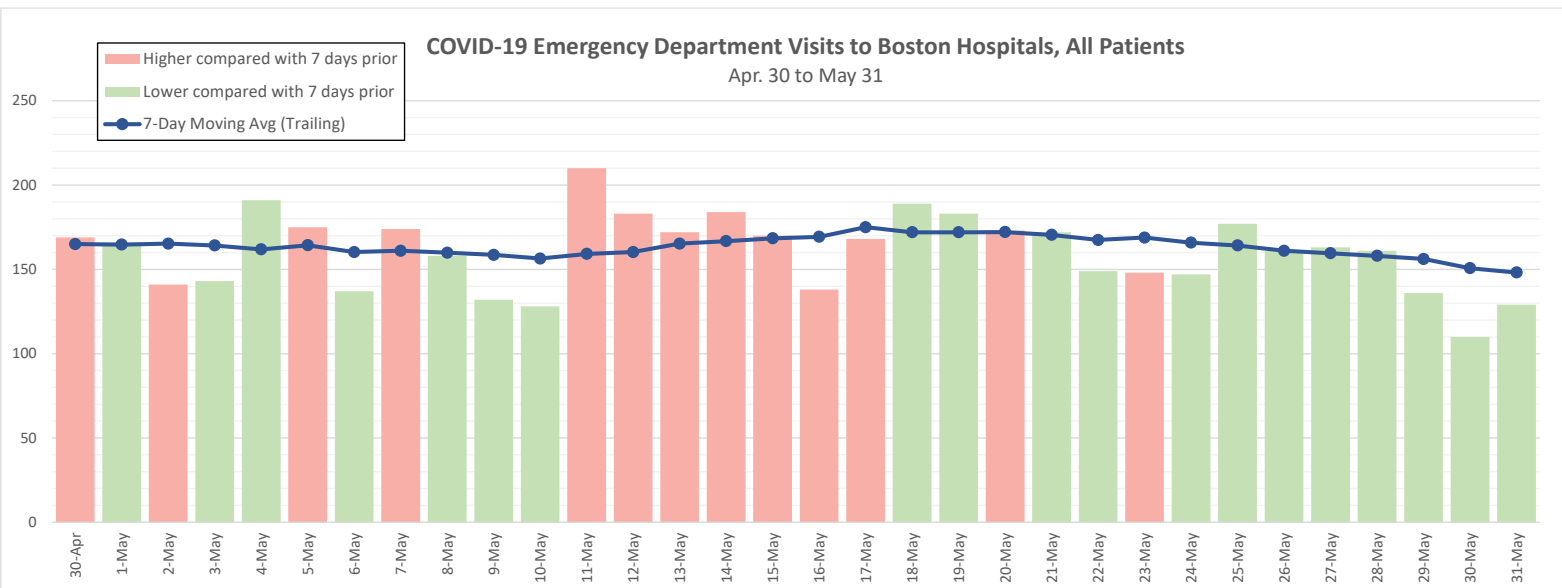

**Current Community
COVID-19 Molecular Tests
Performed**

**May 29:
2,115 per day**
(7-day moving average)

**Number of consecutive
weeks with decrease:
4 (as of May 29)**
Threshold: Decreasing for 3 or more
consecutive weeks

Data downloaded Tuesday, June 1, 2021. As of January 1, 2021, the line for tests based on the cumulative algorithm is no longer being presented as the current algorithm lines provide the most appropriate person-level testing information for assessing testing trends over time. The cumulative algorithm is most appropriately applied for a single-point-in-time calculation of total person-level testing from the start of the pandemic. For more information, please contact the Boston Public Health Commission Research and Evaluation Office (research@bphc.org).

*Data to the left of vertical line assumed to be 95%-99% complete based on assessment of historical data.

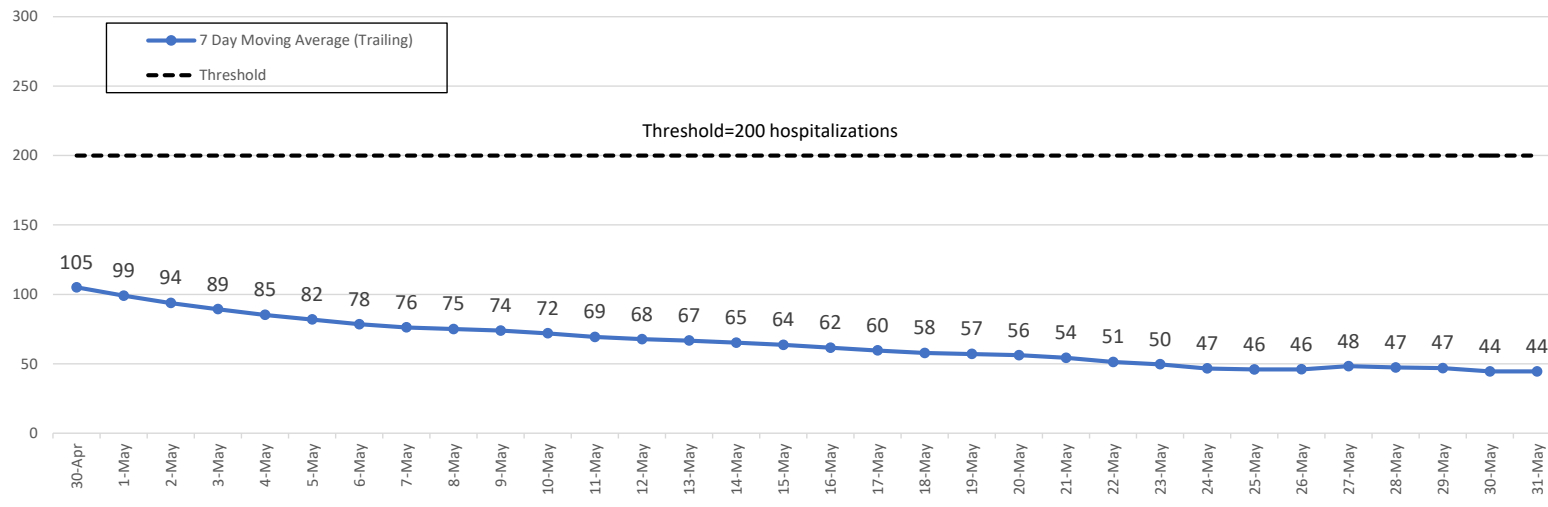

COVID-19 ED visits

**May 31:
148.1 ED visits**
(7-day moving average)

**Number of consecutive
days higher than same
day of previous week:
0 (as of May 31)**
Threshold: 7 consecutive days
higher than same day of
previous week (i.e., red bars)

COVID-19 Adult Hospitalizations (ICU and Medical/Surgical) in Boston Hospitals, All Patients

7-Day Moving Average (Trailing), Apr. 30 to May 31

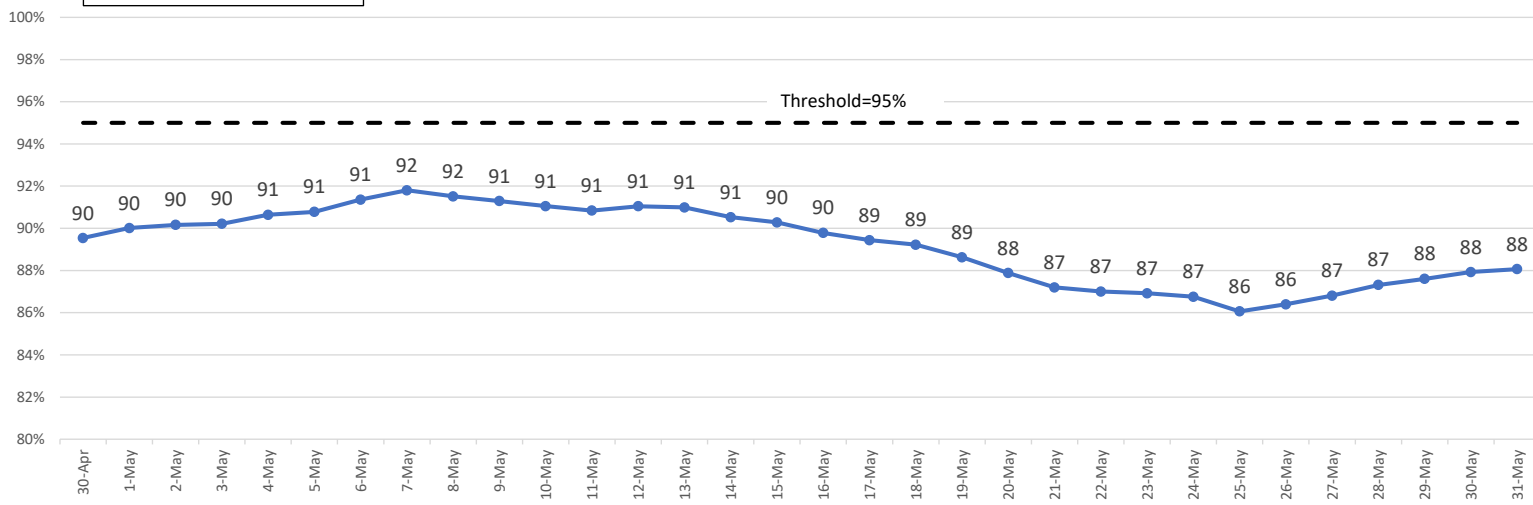

COVID-19 Adult Hospitalizations

May 31:
44 hospitalizations
(7-day moving average)

Number of consecutive days moving average above threshold (200 hospitalizations):
0 (as of May 31)

Percentage of Occupied Adult Non-Surge ICU Beds* at Boston Hospitals, All Patients

7-day Moving Average (Trailing), Apr. 30 to May 31

Percentage of Occupied Adult Non-Surge ICU Beds

May 31:
88%

Number of consecutive days moving average above threshold (95%):
0 (as of May 31)

Threshold: 5 consecutive days above 95%

* Includes staffed adult ICU beds. Does not include staffed surge ICU beds or unstaffed surge ICU beds. Assumes that all ICU beds are used before any surge ICU bed.
